/*  The above results are concerning and cast doubt on values of non-missing data - of the 6
hrns with both recorded and missing Ethnic data:
    one record (hrn  184136) would allow for derivation of Ethnic status (highland); however
    the other 5 entries contain contradictory records in EthnicGr, with the participant
    recorded variously as Papuan and non-Papuan across multiple visits (from 2 to 4).  The
    concerning trend is that all were recorded as Papuan for earlier visits (pre 2009) , but
    for their later visits (all post 2009) they were recorded as non-Papuan, which seems
    non-random error.*/
